

## **Job Description: Trainee Energy Manager**

### Company Background

RUMM Ltd. – Remote Utility Monitoring and Management – is a University spinout company focussing upon helping large companies reduce their energy/utilities costs and carbon footprint. The company is enjoying rapid growth and requires a number of technically competent and ambitious professionals to maintain and develop a first class service to its growing list of clients. The company specialises in supporting energy intensive companies providing a full energy/utility service to clients. RUMM has provided significant energy savings for a number of customers over a broad range of sectors covering manufacturing, utilities and the public sector. For more details of the business see [www.rumm.co.uk](http://www.rumm.co.uk).

### Key Responsibilities

The RUMM business philosophy relies upon providing an excellent service to its clients and as such personal traits such as reliability and integrity will be necessary together with good interpersonal skills. The following are seen as core responsibilities/traits:

- Technically competent

- Have integrity, good inter-personal skills and be able to liaise and communicate clearly to customers and sub-contractors

- Identify and undertake energy savings projects and provide full technical support

- Be capable of carrying out data analysis

- Have good project management skills

### Experience/Qualifications Required

We require Engineers or Technologist preferably educated to at least degree level. We are prepared to train the right people who have the personal attributes and ambition to become an Energy Account Manager.

It would be an advantage for the candidates to have skills in statistical analysis and/or experience of quality management tools particularly related to six sigma. Industrial and commercial experience would be desirable.

### Salary

The salary will depend upon skills and experience and on the job training will be provided to suit each individual.
