

reduce energy, increase profitability, take responsibility

RUMM EMS (Energy Management Services)

RUMM's Energy Management Services consists of a proven methodology which is shown to work every time. Using a hands-on approach backed up by knowledge and expertise, RUMM's Energy Management Services are wide ranging and include, but are not limited to, the following:

- Performing a technical survey for optimum smart meter locations
- Resource assessment/advice/management as required by client
- Developing an energy plan in partnership with client from which initial energy projects are identified (includes project costs, savings and payback)
- Performing analysis/ calculations/ research to reinforce identified projects
- Facilitating regular consultation and planning site meetings with clients to present analysis findings and discuss energy savings projects
- Maintaining a record of energy meeting actions in the form of minute taking
- Continuous research into new technologies, legislation and funding avenues, providing best practice information/ advice to clients
- Helping client coordinate/implement projects, introducing specialist partners as necessary
- Identifying and quantifying savings
- Bespoke advice on systems optimisation and control
- Maintaining momentum through identification of new projects via data analysis and site surveys to maximise the site's potential for energy savings
- Creation of smart meter data presentations incorporating baseload and variability analysis identifying areas of potential energy savings
- Specific Energy Consumption (SEC) analysis and cumulative savings reporting on a monthly basis
- Bespoke analysis on specific projects as required by client
- Quarterly and annual review of progress in line with site's pre-determined targets
- Air leak detection and reporting
- Providing training on energy awareness campaigns
- Generating case studies to promote success
